

VOLUME 1

GENERAL INTRODUCTION AND DEVELOPMENT CONSTRAINTS

MODULE 1 SPACECRAFT DEFINITION AND CHARACTERISTICS	
1.1. SPACE MISSIONS	2
1.1.1.The political role of space and space as a factor in international relations.....	2
1.1.2.Defence matters.....	2
1.1.3.Scientific reserch.....	2
1.1.4.Civil applications.....	2
1.2.THE SPACE SYSTEM.....	2
1.2.1.Laundh.....	2
1.2.2.The space segment.....	2
1.2.3.The user segment	2
1.3.THESPACECRAFT_ITSDESIGN,REQUIREMENTS AND CONSTRAINTS	2
1.3.1.The spacecraft	2
1.3.2.Spacecraft design,requirements andconstraints.....	2
1.4.HOW MISSION REQUIRMENTS AFFECT SATELLITE DESIGN:EXAMPLES	2
1.4.1.Direct television broadcasting missions	2
1.4.2.Altimetry missions	2
1.4.3.Meteorology missions	2
1.4.4.High resolution optical earth observation missions.....	2
1.5.INDUSTRIAL AND ECONOMIC ASPECTS.....	2
1.5.1.Satellite classes	2
1.5.2.Satellite sizes:trends	2
1.5.3.The space industry	2
1.5.4.Economic aspects.....	2
1.6.CONCLUSION:ECONOMIC CONSTRAINTS & TECHNICAL REQUIREMENTS	2

VOLUME 1

GENERAL INTRODUCTION AND DEVELOPMENT CONSTRAINTS

MODULE2 SPACEFLIGHT DYNAMICS	
2.1.FUNDAMENTAL LAWS	2
2.1.1.Keplerian motion	2
2.1.2.Orbital elements	2
2.1.3.Perturbations	2
2.1.4.Impulsive orbital manoeuvres	2
2.1.5.Low thrust orbital manoeuvres.....	2
2.1.6.Time and reference frames.....	2
2.2.APPLICATIONS	2
2.2.1.Orbits and missions.....	2
2.2.2.A mission to the space station.....	2
2.2.3.Orbital mechanics of remote sensing missions	2
2.2.4.Geostationary orbits	2
2.2.5.Interplanetary trajectories.....	2
2.2.6.Constellations	2
2.2.7.Satellite formations	2
2.3.ORBIT DETERMINATION.....	2
2.3.1.Orbit extrapolation.....	2
2.3.2.Tracking measurements.....	2
2.3.3.Orbit determinaation.....	2

VOLUME 1

GENERAL INTRODUCTION AND DEVELOPMENT CONSTRAINTS

MODULE 3 SPACECRAFT ENVIRONMENT AND CONSTRAINTS	
3.1.INTRODUCTION	3
3.2.CHANGES IN THE ATMOSPHERE'S STRUCTURE BETWEEN THE EARTH AND THE SPACE VACUUM	3
3.2.1.The vertical structure of the atmosphere	3
3.2.2.Chemical composition	3
3.2.3.Consequences of the space vacuum	3
3.3.MICROGRAVITY	3
3.3.1.Introduction	3
3.3.2.Consequences	3
3.4.THE RADIATIVE ENVIRONMENT	3
3.4.1.Solar radiation	3
3.4.2.The albedo flux	3
3.4.3.Long-wave radiation	3
3.4.4.Measuring radiation	3
3.4.5.The interaction of non-ionising radiation with spacecraft	3
3.5.THE CHEMICAL ENVIRONMENT	3
3.5.1.Atomic oxygen	3
3.5.2.Outgassing and contamination	3
3.6.THE IONISED ENVIRONMENT	3
3.6.1.Introduction	3
3.6.2.The sun and the solar wind	3
3.6.3.The Earth's magnetosphere	3
3.6.4.The radiation belts	3
3.6.5.The ionosphere and the plasmasphere	3
3.6.6.The induced environment	3
3.6.7.A satellite's charge	3
3.7.METEORITES AND SPACE DEBRIS	3
3.7.1.Meteorites	3
3.7.2.Space debris	3
3.8.CONCLUSION	3

VOLUME 1

GENERAL INTRODUCTION AND DEVELOPMENT CONSTRAINTS

MODULE 4 PRODUCT ASSURANCE AND DEVELOPMENT

4.1.DEVELOPMENT OF A SPACECRFT	3
...4.1.1.Principal project concepts	3
4.1.2.Space standards.....	3
4.1.3.Controlling programme risks	3
4.1.4.Project management phasing and planning for a spacecraft.....	3
4.1.5.Spacecraft verification phasing and planning.....	3
4.1.6.Coordination of project planning and phasing and verification	3
4.1.7.New approaches to project management.....	3
4.1.8.The satellite is the focus of system qualification.....	3
4.2.PRODUCT ASSURANCE FOR SPACECRAFT.....	3
4.2.1.Why product assurance is necessary	3
4.2.2.The role of product Assurance	3
4.3.INTRODUCTION TO VALUE ANALYSIS	3
4.3.1.Introduction	3
4.3.2.The customer: first player in value construction	3
4.3.3.Value analysis definition and corresponding work plan	3
4.3.4.Functional expression of need.....	3
4.3.5.Internal functional analysis(AFI)	3
4.3.6.Conclusion.....	3
4.4.DEPENDABILITY.....	3
4.4.1.Introduction	3
4.4.2.Control of technical risks.....	3
4.4.3.System modeling and evaluation	3
4.4.4.Dependability applications in projects.....	3
4.4.5.Ensuring the safety of manned flights by certifying payloads	3
4.4.6.Conclusion.....	3
4.5.THE QUALITY OF ELECTRONIC COMPONENTS	3
4.5.1.The background to quality assurance for electronic components.....	3
4.5.2.Component quality policies	3
4.5.3.Effects of space radiation on electronic components	3
4.5.4.Elements used in component technology.....	4

4.5.5.Electronic expertise	4
4.6.ELECTRONIC ASSEMBLY TECHNOLOGIES	4
4.6.1.Inventory of assembly technologies	4
4.6.2.Quality policy for electronic assembly technologies	4
4.6.3.Evolutions in electronic assembly teehnology	4
4.7.MECHANICAL QUALITY AND EXPERTISE TOOLS	4
4.7.1.Characteristics of materials and mechanisms	4
4.7.2.The particular difficulties of the space industry	4
4.7.3.Controlling the quality of 'materials and mechanisms'	4
4.7.4.Changes in the field.....	4
4.8.EVOLUTIONS AND TRENDS.....	4

VOLUME 2
PAYLOADS

MODULE 5 TELECOMMUNICATION MISSIONS AND PAYLOADS

5.1.INTRODUCTION TO SATELLITE COMMUNICATIONS	2
5.1.1.Electromagnetic waves	2
5.1.2.Satellite communication techniques	2
5.1.3.Network concepts-communication Protocols	2
5.2.RADIO FREQUENCY TELECOMMUNICATIONS	2
5.2.1.Regulations	2
5.2.2.Missions and applications	2
5.2.3.Architecture of telecommunications systems	2
5.2.4.Architecture of telecommunication payloads	2
5.3.OPTICAL TELECOMMUNICATION	2
5.3.1.Inter and intra-satellite optical communication	2
5.3.2.Optical link Architecture	2
5.3.3.Simplified dimensioning.....	2
5.3.4.Applications	2
5.3.5.Conclusion.....	2

VOLUME 2
PAYLOADS

MODULE 6 MISSIONS AND PAYLOADS FOR RADIO NAVIGATION AND POSITIONING

6.1.DEFINITIONS OF POSITIONING AND NAVIGATION SYSTEMS.....	2
6.1.1.Definitions.....	2
6.1.2.Characteristics of spacecraft –desired performance levels	2
6.1.3.Satellite positioning/navigation objectives	2
6.1.4.Description of satellite radio navigations / positioning systems	2
6.2.PRINCIPLE OF POSITIONING / NAVIGATION SYSTEMS	2
6.2.1.Introduction	2
6.2.2.Range measurement.....	2
6.2.3.Velocity measurement	2
6.2.4.Angel measurement.....	2
6.3.POSITIONING AND NAVIGATION TECHNOLOGY.....	2
6.3.1.Introduction	2
6.3.2.Measurement chain.....	2
6.3.3.Link budget.....	2
6.3.4.Elements of a positioning/navigation receiver	2
6.4.ERRORS IN POSITIONING MEASUREMENTS.....	2
6.4.1.Introduction – Definitions	2
6.4.2.Effects of short-term noise	2
6.4.3.Dynamic effects.....	2
6.4.4.Propagation effects	2
6.4.5.Effect of the space segment	2
6.4.6.Effect of the ground segment	2
6.5.CONCLUSION – CURRENT TRENDS.....	2

VOLUME 2
PAYLOADS

MODULE 7 OBSERVATION AND SCIENCE MISSIONS AND PAYLOADS

7.1.MISSIONS AND MEASUREMENT PHYSICS	2
7.1.1.Observation and science missions.....	2
7.1.2.Information vectors.....	2
7.1.3.Measuring electromagnetic waves	2
7.2.OPTICAL INSTRUMENTATION	2
7.2.1.Introduction	2
7.2.2.Satellite imagery.....	2
7.2.3.Synthetic apertures and optical interferometry.....	2
7.2.4.Radiometers	2
7.2.5.Imaging spectrometers	2
7.2.6.Passive sounders.....	2
7.2.7.Active measurements	2
7.3.PASSIVE RADIOFREQUENCY INSTRUMENTATION.....	2
7.3.1.Introduction(theoretical concepts)	2
7.3.2.instrument principles	2
7.3.3.Thematic aspects of microwave radiometers.....	2
7.3.4.Description of instruments,technologies and applications	2
7.4.ACTIVE RADIOFREQUENCY INSTRUMENTATION.....	2
7.4.1.Introduction	2
7.4.2.Backscattering for different kinds of application.....	2
7.4.3.Imaging radars	2
7.4.4.Altimeters	2
7.4.5.Other radars.....	2
7.5.INTRODUCTION TO IMAGE QUALITY AND DATA PROCESSING.....	2
7.5.1.Optical data.....	2
7.5.2.Sampling and restoratoin.....	2
7.5.3.Radar image quality	2

VOLUME 2
PAYLOADS

MODULE 8 RADIOFREQUENCY TECHNIQUES

8.1.INTRODUCTION TO RADIOFREQUENCY SUBSYSTEM ARCHTECTURE	3
8.1.1.Simplified diagram of a bent—pipe telecommunications payload.....	3
8.1.2.'Ideal'diagram of a regenerative telecommunications payload	3
8.1.3.More realistic diagram of a regenerative telecommunications payload.....	3
8.1.4.Transmission/reception radar module	3
8.1.5.RF subsystem of an active antenna radar	3
8.1.6.SPOT telemetry payload	3
8.2.ANTENNAS.....	3
8.2.1.Introduction:an overview of antenna radiation.....	3
8.2.2.Microwave wire,horn and optical antennas.....	3
8.2.3.Array antennas and active antennas.....	3
8.2.4.Space based missions and associated antenna designs	3
8.2.5.Antenna design and characterization.....	3
8.2.6.Conclusion.....	3
8.3.SMALL SIGNAL RECEPTION AND TREATMENT	3
8.3.1.Low noise reception	3
8.3.2.Performance of a low noise receiver.....	3
8.3.3.Receiver sub-Assemblies	3
8.3.4.Other small signal functions.....	3
8.3.5.Receiver system technology.....	3
8.4.GENERATION OF STABLE FREQUENCIES	3
8.4.1.Definitions.....	3
8.4.2.Performances of different stable frequency generators.....	3
8.4.3.Frequency synthesis	3
8.4.4.Time and frequency transfer via satellites.....	3
8.4.5.Space programme needs.....	3
8.5.TRANSMISSION AND HIGH POWER CIRCUITS.....	3
8.5.1.The power amplification function	3
8.5.2.Power amplification performances.....	3
8.5.3.Travelling wave tube amplifiers.....	4
8.5.4.Solid state amplifiers.....	4

8.5.5.Distributed Amplification.....	4
8.5.6.Breakdown and multipactor effect.....	4
8.6.FILTERING AND PASSIVE EQUIPMENT	4
8.6.1.A filter's template	4
8.6.2.Filter design.....	4
8.6.3.Receiving filters	4
8.6.4.Transmission/reception diplexers	4
8.6.5.Channel filters	4
8.6.6.Low-pass filters.....	4
8.6.7.Other passive equipment.....	4
8.7.DIGITAL TRANSMISSIONS	4
8.7.1.Introduction	4
8.7.2.Sampling and digitizing	4
8.7.3.Characterisation of digital messages.....	4
8.7.4.Bit rate and capacity of the transmission channel.....	4
8.7.5.Time domain representation of information signals	4
8.7.6.Modulation of the carrier.....	4
8.7.7.Signal demodulation.....	4
8.7.8.Reconstruction of digital message.....	4
8.7.9.Error correcting code	4

VOLUME 2
PAYLOADS

MODULE 9 OPTICAL AND OPTOELECTRONIC TECHNIQUES

9.1.OPTICAL FUNCTIONS	2
9.1.1.Introduction	2
9.1.2.Telescopes for collection and angular filtration of flux	2
9.1.3.Spectral filtering.....	2
9.1.4.The emission of coherent light	2
9.2.OPTICAL TECHNIQUES	2
9.2.1.Introduction	2
9.2.2.Optical calculations	2
9.2.3.Stray light	2
9.2.4.Control and integration of telescopes by interferometry	2
9.3.OPTICAL TECHNOLOGIES	2
9.3.1.Introduction	2
9.3.2.Telescope-related activities	2
9.3.3.Optical coatings	2
9.3.4.Laser sources	2
9.3.5.Guided optics:optical fibre.....	2
9.3.6.Adhesive and molecular bonding assembly techniques	2
9.4.DETECTORS	2
9.4.1.Operation	2
9.4.2.The main categories.....	2
9.4.3.CCD detectors	2
9.4.4.APS.....	2
9.4.5.Detector performance	2
9.5.DETECTION ELECTRONICS.....	2
9.5.1.Electronics combined with elementary detectors.....	2
9.5.2.CCD Video electronics	2
9.5.3.Different means for implementing electronics for detectors.....	2
9.5.4.Manufacturing principle for analog ASICs.....	2

VOLUME 2
PAYLOADS

MODULE 10 MECHANICAL AND THERMAL ENGINEERING

10.1.GENERAL ARCHITECTURE AND DESIGN OF SATELLITES.....	2
10.1.1.Introduction	2
10.1.2.Design methodology.....	2
10.1.3.Design recommendations	2
10.1.4.Using CAD models.....	2
10.1.5.Examples.....	2
10.2.SPACECRAFT STRUCTURE	2
10.2.1.Introduction to spacecraft structures-overview & definitions	2
10.2.2.Mechanical environment	2
10.2.3.Design and dimensioning criteria	2
10.2.4.Special structures:active structures	2
10.2.5.Structural Analyses	2
10.2.6.Development plan and structural tests	2
10.2.7.Structural materials.....	2
10.3.THERMAL CONTROL.....	2
10.3.1.Objectives of thermal control of space vehicles	2
10.3.2.Some basic heat exchange principles.....	2
10.3.3.Application to body in space.....	2
10.3.4.Development and verification of thermal control.....	2
10.3.5.Common thermal control techniques.....	2
10.4.MECHANISMS.....	2
10.4.1.Introduction	2
10.4.2.Principal functions of onboard mechanisms.....	2
10.4.3.Methods and technologies	2
10.4.4.Mechanism design	2
10.4.5.Applications examples.....	2

VOLUME 2
PAYLOADS

MODULE 11 PROPULSION

11.1.INTRODUCTION	2
11.1.1.Propulsion subsystem functions.....	2
11.1.2.Basic concepts	2
11.1.3.Propulsion techniques.....	2
11.2.CHEMICAL PROPULSION	2
11.2.1.Pyrotechnics and solid propellant propulsion.....	2
11.2.2.Using thrusters	2
11.2.3.Cold gas propulsion.....	2
11.2.4.Monopropellant propulsion using hydrazine	2
11.2.5.Conventional bipropellant liquid propulsion	2
11.2.6.Hybrid propulsion	2
11.2.7.New technologies.....	2
11.3.ELECTRIC PROPULSION	2
11.3.1.Reasons for using electric propulsion.....	2
11.3.2.The different technologies	2
11.3.3.Development stage of various thruster types	2
11.3.4.Advanced concepts	2
11.4.THE PROPULSION SUBSYSTEM	2
11.4.1.Design-Architecture.....	2
11.4.2.Propellant storage and pressurisation.....	2
11.4.3.Propellant management	2
11.4.4.Plume effects	2
11.4.5.Integration and testing.....	2
11.4.6.The launch campaign.....	2
11.5.FUTURE PROSPECTS	2
11.5.1.Low orbit missions	2
11.5.2.Geostationary telecommunication buses	2
11.5.3.Interplanetary missions.....	2

VOLUME 2
PAYLOADS

MODULE 12 ATTITUDE CONTROL AND POINTING

12.1.INTRODUCTION	2
12.1.1.A definition of attitude control and why it is needed	2
12.1.2.Principles of attitude control.....	2
12.2.MODELLING ATTITUDE MOTIONS.....	2
12.2.1.Coordinate systems.....	2
12.2.2.Kinematics	2
12.2.3.Simplified equations of motion and applications	2
12.2.4.Dynamic disturbing torques applied to a satellite	2
12.3.TECHNIQUES AND TECHNOLOGIES	2
12.3.1.The attitude and orbit control system(AOCS)loop.....	2
12.3.2.Sensors and attitude estimation	2
12.3.3.Attitude control and actuators	2
12.3.4.Orbit control mode	2
12.4.EXAMPLES OF ATTITUDE CONTROL SYSTEMS	2
12.4.1.Satellite in geostationary orbit	2
12.4.2.SPOT:Earth observation satellite in low orbit	2
12.4.3.PROTEUS – MYRIADE : other low orbit mission	2
12.4.4.Payload stabilisation and fine pointing	2
12.5.VALIDATION OF THE ACS	2
12.5.1.Introduction	2
12.5.2.ACS models and validation benches	2
12.5.3.Functional Validation	2
12.5.4.Conclusion.....	2
12.6.CONCLUSONS.....	2

VOLUME 2
PAYLOADS

MODULE 13 ELECTRICAL ARCHITECTURE

13.1.GENERAL DESCRIPTION OF THE ELECTRICAL SYSTEM	2
13.2.PRIMARY THERMAL SOURCES	2
13.2.1.Principles	2
13.2.2.Photovoltaic solar generators.....	2
13.2.3.Other genarators.....	2
13.3.ELECTROCHEMICAL SOURCES.....	2
13.3.1.Primary sources	2
13.3.2.Nickel-cadmium cell	2
13.3.3.Nickel-hydrogen cell	2
13.3.4.Lithium-ion cell.....	2
13.4.POWER DISTRIBUTION ARCHITECTURES	2
13.4.1.Power bus operation	2
13.4.2.Power bus distribution	2
13.4.3.Voltage distribution to equipment	2
13.5.ELECTROMAGNETIC COMPATIBILITY	2
13.5.1.Methods of controlling electromagnetic compatibility	2
13.5.2.Case studies	2
13.6.ELECTROSTATIC DISCHARGES	2
13.6.1.Interaction of materials with the environment.....	2
13.6.2.Protection methods	2
13.6.3.References	2

VOLUME 2
PAYLOADS

MODULE 14

ONBOARD DATA HANDLING-FUNCTIONS,ARCHITECTURE & SOFTWARE

14.1.SOME GENERAL ASPECTS OF SATELLITE COMMAND AND CONTROL	3
14.1.1.Introduction	3
14.1.2.Definitions.....	3
14.1.3.Satellite monitoring.....	3
14.1.4.Payload flight operations.....	3
14.2.ONBOARD DATA HANDLING FUNCTIONS	3
14.2.1.Introduction	3
14.2.2.Division of Data Handling Functions between the Satellite and the ground segment	3
14.2.3.Specifications which affect the design of onboard data handling systems.....	3
14.2.4.Telecommands/Telemetry	3
14.2.5.Satellite monitoring and control	3
14.2.6.Internal satellite communication.....	3
14.2.7.Synchronization and time management.....	3
14.2.8.Data processing.....	3
14.2.9.Data storage.....	3
14.3.TELEMETRY / TELECOMMAND.....	3
14.3.1.Introduction	3
14.3.2.TM/TC transmission principles.....	3
14.3.3.TM/TC PCM standards(first generaton).....	3
14.3.4.An introduction to CCSDS	3
14.3.5. TM/TC packet standards.....	3
14.4.ONBOARD DATA HANDLING SUBSYSTEM ARCHITECTURE.....	3
14.4.1.The conventional star architecture	3
14.4.2.Modular architecture using a data bus.....	3
14.4.3.Satellite control methods.....	3
14.4.4.Architecture summary.....	3
14.5.INTRA-SATELLITE COMMUNICATION	3
14.5.1.The OBDH standard.....	3

14.5.2. The MIL-STD-1553B standard	3
14.6. FLIGHT SOFTWARE	3
14.6.1. The main functions of flight software	3
14.6.2. Specific constraints	4
14.6.3. Development process	4
14.6.4. Architecture of real time software	4
14.6.5. Future perspectives	4
14.7. ON BOARD DATA STORAGE	4
14.7.1. Constraints	4
14.7.2. Requirements	4
14.7.3. Technology currently in use	4
14.8. EXAMPLES OF ONBOARD DATA HANDLING SUBSYSTEMS	4
14.8.1. Stentor	4
14.8.2. Spot 4	4
14.8.3. Clementine	4
14.8.4. Proteus	4

VOLUME 2
PAYLOADS

MODULE 15 PLANETARY EXPLORATION

15.1.SPECIFIC PROBLEMS INVOLVED IN PLANETARY EXPLORATION.....	3
15.1.1.Operational problems	3
15.1.2.Knowledge of the environment	3
15.1.3.Power problems.....	3
15.1.4.Communications	3
15.1.5.Testability.....	3
15.1.6.Resistance to the environment.....	3
15.2.VEHICLE DESIGN	3
15.3.OPERATING MODES	3
15.3.1.Implicit set-up for the operation	3
15.3.2.Direct remote operation.....	3
15.3.3.Assisted remote operation.....	3
15.3.4.Autonomous mode.....	3
15.4.PERCEPTION OF THE ENVIRONMENT	3
15.4.1.Perception systems	3
15.4.2.stereovision algorithms	3
15.4.3.Reducing calculation times.....	3
15.5.ROBOT NAVIGATION	3
15.5.1.Statement of the method presented.....	3
15.5.2.Digital terrain model	3
15.5.3.Navigation map and map merging	3
15.5.4.Planning paths.....	3
15.5.5.Planning perceptions	3
15.5.6.Calculation time (experimental results).....	3
15.6.VEHICLES AND TEST FACILITIMES	3
15.6.1.Experimental site	3
15.6.2.Experimental vehicles	3
15.7.PERFORMANCE AND EXPLORATORY MISSIONS THAT CAN BE CONSIDERED IN THE SHORT TERM.....	3
15.8.OPEN ISSUES AND ORIENTATION OF STUDIES.....	3
